

Main page:

My name is Corey Wisser and I studied Computer Science with a minor in Information Technology at Michigan State University. I am pursuing a career in Information Technology as solving technical problems is a great interest and passion of mine. Thank you for allowing me to share this passion with you.

Projects:

As a member of the Information Technology Minor at MSU, I completed a senior design project for the University Club of MSU. The role I took in the project was as a business analyst and technical advisor. My team and I implemented employee workstations, helped to eliminate paper forms and documentations, and also improved workflow by utilizing software for shift scheduling and planning.

I also designed this personal website as a project for web design at MSU. I hope you find it informative and helpful in learning more about me.
